## Fund overview

The fund's strategy is founded on the fact that, in credit markets, short term price volatility can temporarily lead to relative mispricing of bonds. Our model enables us to incorporate long term dislocations into a traditional yield curve approach. These structural factors are a persistent characteristic of a bond that can throw-off a more naive RV strategy. The distinction between short-term and long-lasting price influences is critical for a successful RV strategy. Our sector specialists identify the reasoning behind price mis-alignments and search for those likely to correct in the short/medium term. Using a long/short approach, we aim to capture the differential between bond spreads (within the same bond curve or sector) generated by temporarily imbalances and profit once the factors that cause this mis-pricing dissipate.
